

Dr. Gautam Das  
CEO, Siu-Ka-Pha Hospital

"We wish you all a happy, healthy, and prosperous Diwali.

Siu-Ka-Pha Multispecialty Hospital, a CSR initiative by the ONGC is operated by Dr. Babasaheb Ambedkar Vaidyakiya Pratishthan. It is a charitable trust that strives to bring social change through compassionate health services. It was founded in 1989, BAVP's vision is to provide health and social services to underprivileged communities, farmers, women, and children. Currently, the trust runs more than 50 medical and social projects in urban, rural, and tribal parts of Maharashtra and Assam. This includes three Multispecialty hospitals, a world-class blood bank, health and community centers, mobile health clinics, women and child development programs, and assistance and guidance to farmers.

We are trying to implement proper healthcare facilities in remote areas.

Aside from doctors, some of the factors that help a hospital run smoothly are the supply chain, proper biomedical backup, training, well-defined protocols, and, most importantly, a good information technology system that allows the human workforce to work more efficiently. Our approach complements our goal of providing quality and affordable services in these areas and striving to be the destination of choice for healthcare needs. We are able to serve the community because of our checks and balances, which include infection control, training, IT infrastructure, and a proper biomedical team to support all of our sophisticated and high-end equipment.

We understand how these processes contribute towards a good hospital- addressing antibiotic resistance, proper diagnostics, correct protocols, and even waste disposal. We are trying to control infections and enable a quicker discharge.

BAVP is continuously working towards providing its hospitals with high-grade diagnosis and treatment methods. We are now well equipped with ECG, X-ray, USG, advanced radiology services like Multi-slice CT scan, 1.5 Tesla MRI scan, mammography machine, also many services like critical care and emergency services, pediatric care with NICU, minimal access surgery, ENT and skull base surgery, etc. With the support of the ONGC foundation, we aim to

bring super specialty services to this region along with the best amenities at a very affordable price. Now no need to travel far for the best healthcare."
